SUMMARY

Computer Engineering graduate of Tokat Gaziosmanpaşa University (2025). I collect, clean, model and analyse data with Python, SQL and PostgreSQL, combine and validate data from multiple sources, and design relational data models. In my projects I have produced risk metrics from price time series and calculated a personal inflation index from grocery receipts. I have used the Claude API with structured outputs for data extraction and validation, and I actively use Claude Code, Codex and similar AI tools at every stage of development. I verify my data flows with unit and integration tests and set up CI/CD pipelines in GitHub Actions so tests run automatically on every commit. I am seeking data analysis, data modelling and AI-focused roles.

EXPERIENCE

Computer Engineering Intern | Eduji R&D Software Design and Consultancy Inc.
Bornova, İzmir, Türkiye | July 2024 – September 2024

- Queried large data sets through REST APIs using server-side filtering and pagination to keep data transfer efficient.
- Worked with the backend team to test API responses and validate data contracts in Postman.
- Helped build a survey and rewards app in Flutter; implemented token-based authentication.

PROJECTS

Portfolio Tracker | Python, pandas, PostgreSQL, Node.js, Claude API, MCP · github.com/KaanCan1/portfolio-tracker

- Built a data layer that collects stock, fund and gold prices from three financial data providers, falls back automatically when a source fails, and loads the data into a relational PostgreSQL model.
- Generated technical analysis signals from price time series and measured their results; built a risk module with a correlation matrix, 95% VaR, portfolio beta and a Monte Carlo forecast.
- Used Claude API structured outputs to validate data extracted from free text against a schema, and exposed the API to AI assistants as tools through an MCP server. Added 283 unit tests and CI/CD.

Sepet — Personal Inflation Index | PostgreSQL, SQL, Node.js, Flutter, OCR, Claude API · github.com/KaanCan1/Sepet

- Built an app that calculates a personal inflation index from grocery receipts. Computed the chained Laspeyres index with 12-month spending weights in PostgreSQL functions that run next to the data.
- Designed a normalization layer that maps abbreviated receipt items to a standard product catalogue with fuzzy matching, calling the Claude API only for lines the matcher is unsure about.
- Pulled the official CPI series from the TCMB EVDS API. Ran OCR on the device, so only parsed line items are sent to the server.

Open Basket | Dart, PostgreSQL, WebSocket, Flutter · github.com/KaanCan1/Open-Basket · Live demo

- Built with one teammate for the BuilderBase Serverpod Hackathon: a shared household basket that syncs in real time and calculates who owes whom at checkout.
- Generated a PostgreSQL schema from 17 models; enforced one open basket per household at the database level with a partial unique index and calculated balances in integer minor units.
- Pushed updates over WebSocket; added integration tests and CI, and the backend is deployed to the cloud.

EDUCATION

Tokat Gaziosmanpaşa University | BSc in Computer Engineering | 2021 – 2025
GPA: 88.02 / 100

- Relevant coursework: artificial intelligence, machine learning, statistics, databases, data structures and algorithms.

TECHNICAL SKILLS

Data & Analysis: Python (pandas), SQL, data cleaning, data modelling, ETL, time series analysis
AI: Claude API (structured outputs), LLM integration, MCP, Claude Code, Codex, OCR
Databases: PostgreSQL, MySQL, SQL Server
Programming Languages: Python, SQL, JavaScript, Dart, Java, C#
Tools & Testing: Git, Docker, GitHub Actions (CI/CD), Postman, Node.js, REST API, Unit and Integration Testing

CERTIFICATES AND LANGUAGES

Certificates: Huawei & CloudMetrik – Cybersecurity Bootcamp (2026) · BTK Academy – Cybersecurity
Languages: Turkish (Native) | English (B2, Upper-Intermediate) | German (A2, Elementary)
