SUMMARY

Computer Engineering graduate (Tokat Gaziosmanpaşa University, 2025) with hands-on experience in SQL, PostgreSQL, data modelling, data processing and backend development. Built data validation and transformation (ETL) pipelines with Python and Node.js over structured and unstructured data. Built processing layers that turn free text into schema-conformant data through Claude API integration. Strong interest in master data management, data quality and process automation.

EXPERIENCE

Computer Engineering Intern | Eduji R&D Software Design and Consultancy Inc.

Bornova, İzmir, Türkiye | July 2024 – September 2024

- Implemented REST API integration and contributed to querying and transforming large data sets through server-side filtering and pagination logic.
- Contributed to the development of a survey-based, reward-driven mobile application with Flutter; implemented token-based authentication and state management with GetX, and designed the UI in Figma.
- Tested backend APIs with Postman to validate data contracts, working in close coordination with the backend team.

PROJECTS

Portfolio Tracker | Node.js (Express), PostgreSQL, Python, pandas, Claude API · github.com/KaanCan1/portfolio-tracker

- A full-stack web application that tracks a stock, fund and gold portfolio on live prices, generates trading signals from technical analysis and measures the return of each signal; all layers built by me.
- Designed a 40+ endpoint REST API and relational data model on Express + PostgreSQL; integrated three financial data providers (Finnhub, TwelveData, Yahoo) behind a fallback chain, and built a schema-validated processing layer using Claude API structured outputs to turn unstructured text into structured data.
- Set up 283 unit tests and a GitHub Actions CI/CD pipeline; the application is containerised with Docker and runs live on Render.

Sepet — Personal Inflation Index | Flutter, Node.js, PostgreSQL, OCR · github.com/KaanCan1/Sepet

- Built an iOS app that computes personal inflation from a user's own receipts, using the official index's method (chained Laspeyres) with weights derived from their 12-month spending.
- Designed the Node.js REST API and a normalised PostgreSQL schema; wrote the matching layer inside the database that maps abbreviated receipt-line names onto a canonical product catalogue.
- Ran the OCR on the device, so only parsed lines reach the server and the receipt image never leaves the phone — a decision that also cut backend cost and latency.

EDUCATION

Tokat Gaziosmanpaşa University | BSc in Computer Engineering | 2021 – 2025

GPA: 88.02 / 100

- Relevant coursework: database management, data structures and algorithm analysis, artificial intelligence, machine learning, statistics and network security.
- Extended coursework with dynamic web projects in PHP/MySQL and native mobile apps in Java/Android Studio.

TECHNICAL SKILLS

Data & Databases: SQL, PostgreSQL, MySQL, SQL Server, SQLite, data modelling, schema design, ETL / data pipelines, data validation, data quality, data integration via REST APIs, JSON

Programming Languages: Python, SQL, JavaScript, Dart, Java, C#, PHP

Backend & Tools: Node.js, Express, ASP.NET, REST API, Docker, CI/CD, GitHub Actions, Git, Postman, Render, unit testing (node:test)

AI & Data Analysis: Claude API (structured outputs, prompt engineering, MCP), pandas, scikit-learn, natural language processing, machine learning

Mobile & Web: Flutter, GetX, Firebase, Firebase Cloud Messaging, Android Studio, OCR, HTML5, CSS3

Other: Object-oriented programming (OOP), Figma, UI/UX design, Agile/teamwork

CERTIFICATES AND LANGUAGES

Certificates: Huawei & CloudMetrik – Cybersecurity Bootcamp (2026) · BTK Academy – Cybersecurity

Languages: Turkish — Native · English — B2 (Upper-Intermediate) · German — A2 (Elementary)
